Year 1 — Online Safety: Being Safe

Principles
Computers are a privilege
We need to keep ourselves safe online

What is a computer?	Why are electrics dangerous?	What should we do to keep ourselves and computers safe?
A computer is a electronic device we use for many purposes such as: Work Communication Fun There are also other electronic devices like a tablet, phone or laptop.	A computer is run on electrics, which can give you a powerful shock. To protect ourselves we do not mess with wires or plugs and ask an adult for help if they need it.	We should always treat electronics with respect. Not lifting, dropping or damaging them. Never put water near to computers. If there are every any issues, Tell and adult (SMART rules)

Why is a password useful?	How should we use our personal information?	What should we do if we are not sure about something we have seen?
A password keeps our information a secret, which is good. We don't tell people so that our information stays to ourselves. A password should be hard to guess and only kept to yourself and trusted adults.	We don't give personal information out online. Address, full name and telephone numbers should never be shared. Otherwise, everyone could get that information and some people might not use it well.	Tell an adult. Leave the computer where it is and tell then show your adult. People and websites and be blocked so that the internet will be safer for you.
